4. How do you create a form in Remedy,

and what are best practices?

Answer: Creating a form in Remedy involves several steps, typically performed within the Remedy Developer Studio:

Steps to create a form: 1. Open Developer Studio: Connect to the Remedy AR System server. 2. Create a New Form:

Use the 'Create Form' option, specify the form name, and choose the appropriate form type (e.g., Main, Join, or View form). 3. Define Fields: Add fields such as text, date/time, picklists, or references, aligning with the data requirements.

4. Set Field Properties: Configure attributes like display labels, data types, maximum lengths, and dependencies. 5.

Create Layouts: Design the user interface with sections, tabs, and field arrangements. 6. Configure Access Controls:

Set permissions for different user roles to ensure data security. 7. Implement Workflow Elements: Attach filters,

active links, and escalations as needed. Best practices

include: - Naming Conventions: Use clear, descriptive names for forms and fields. - Normalization: Avoid redundant data; normalize forms to reduce duplication.

- Security: Apply least privilege principles by setting appropriate access controls. - Documentation: Document form purpose, fields, and workflows for future reference.

- Testing: Rigorously test forms in a development environment before deployment. - Performance Optimization: Limit the number of fields and complex scripts to enhance performance.

Mastering form creation is fundamental for customizing Remedy to meet

organizational needs effectively.

5. What are Active Links and Filters? How do they differ?

Answer: Active Links and Filters are scripting mechanisms in Remedy used to automate processes, but they operate at different levels and serve different purposes. Active Links: - Client-side scripts executed within the Remedy User Interface. - Triggered by user actions such as field changes, form open/close events. - Used for real-time validation, dynamic field visibility, or populating dependent fields. - Written in Remedy's proprietary scripting language. -

Example: When a user selects a specific category, an active link displays additional fields relevant to that category.

Filters: - Server-side scripts executed on the AR System server. - Triggered by database events such as record create, modify, or delete. - Used for data validation, record manipulation, notifications, and process automation. - More powerful as they can perform complex logic and interact with multiple forms. - Example: Automatically assign a ticket to a technician when a new incident is created with a

specific priority. Differences summarized:

Aspect	Active Links	Filters
Execution Layer	Client-side	Server-side
Triggered By	User actions	Database events
Typical Use	UI validations, dynamic UI changes	Data validation, workflow automation
Complexity	Generally	

simpler | Can be complex and powerful | Understanding the appropriate use cases for Active Links and Filters is critical for designing efficient and maintainable Remedy applications.
